Parapsychological research and spiritual treatment of the light of the Qur'an convinced Dr. Arthur J. Alison of the scientific truth of Islam, reports "Okaz", the Arabic daily of Jeddah. Dr. Alison, who embraced Islam while attending a scientific conference in Cairo said that the Muslims have failed to demonstrate the scientific reality of Islam to the people of other religions.

Now named as Abdullah Alison, the head of the department of electrical and electronic engineering in a British University, urged Western scientists to get acquainted with Islam which "addresses both intellect and sentiments at the same time."

Several western scientists who happened to study the Qur'an when their academic research warranted it ultimately embraced Islam finding it a purely scientific religion which does not negate modern scientific research and unlike other religions and philosophies confirms many scientific and technological theories.

Dr. Alison said that he worked for six years as the chairman of the British Parapsychology and Spiritual Studies Society. This position, he said led him to deeply study different religions and philosophies, including Islam.

Dr. Alison submitted a research paper to the Cairo Conference dealing with the relationship between sleep and death which, he said was on substantial studies with electrical and electronic instruments, his main area of specialisation.

He said that while writing the papers for the Cairo conference, his major goal was to study parapsychology and spiritual medicine in the light of the Qur'an.

The results were surprisingly outstanding and very convincing as to the nature and condition of sleep and death as well as other related phenomena said Dr. Alison. "My joy knew no bounds as the result of my study was so convincing and, thus, I discovered Islam." He added. He regretted that the West is totally ignorant about the scientific approach of Islam. "During our discussion at this conference, we have arrived at the conclusive evidence that Islam does not contradict science, and plan to do further research on parapsychology in the light of the Qur'an," the British scientist said.

While preparing his paper for the Cairo conference, Dr. Alison stopped at a verse of the Holy Qu'ran which meant:

"It is Allah (God Almighty) that takes the souls (of men) at death; those that die not (he takes) during their sleep: Those on whom He has passed the decree of death; He keeps back (from returning to life): But the rest he sends (to their bodies) for a term appointed. Verily in this are Signs for those who reflect."

(Al-Qur'an Sura 39 Al-Zummar: Verse 42)

To throw more light scientifically on this section of the Qur'an Dr. Alison worked with Dr. Al-Mushrefi and managed to prove scientifically that sleep and death are one single process as stated in the above quoted verse of the Qur'an and said that the Muslims have neglected by not projecting these scientific facts of the Qur'an to the non-Muslims.

He said his experiments have shown that something goes out of the human body when man or woman is asleep and returns later which make them awake. But with the death that something does not return. "And that is what the Qur'an says in very clear words". Dr. Alison added, "I am convinced of what the Qur'an says".

Dr. Al-Mushrefi, an Arab scientist from the north Yemen and an associate of Dr. Alison, said that Dr. Alison never ate pork or drank alcohol in his life and now after embracing Islam he will certainly help in spreading the message of Islam.

QUR'AN'S CONFIRMATION OF AN AMAZING UNDERSEA DISCOVERY LEADS FRENCH OCEANOGRAPHER TO ISLAM

The famous French oceanographer Mr Jacques Yves Cousteau, who has spent his lifetime on undersea discoveries and is considered an authority on undersea exploration has embraced Islam after his amazing undersea discovery was confirmed by the Holy Qur'an the last and final revealed guidance of Allah (God Almighty) for the whole of mankind and Jinns.

One day somewhere in deep ocean, Mr Jacques Yves Cousteau was doing some undersea exploration when he discovered that within the salty sea water there were several springs of sweet palatable water.

What amazed him most was the fact that the sweet water of the springs was not mingling with the salty water of the sea. For a long time he tried to find plausible excuses for this phenomena, but to no avail.

One day when he mentioned it to a professor who told him this phenomena simply followed Allah's command as clearly explained in the Holy Qur'an. He then read to Mr Cousteau the following verses from the Holy Qur'an:

"It is he (Allah) Who has let free the two bodies
of flowing water: one palatable and sweet,
and a other salty and bitter; yet has he
made the barrier between them, a partition
that is forbidden to be passed."

(Al-Qur'an Surah 25 Al-Furqan: Verse 53)

"And (He Allah) made a separating bar
between the two bodies of flowing waters."

(Al-Qur'an Surah 27 An-Naml: Verse 61)

"He (Allah) let free the two bodies of flowing
water, meeting together: between them is a
barrier which they do not transgress."

(Al-Qur'an Surah 55 Al-Rahman: Verse 19:20)

Hearing this, Mr Cousteau said that surely the Qur'an is a divine Book and embraced Islam. (This was reported in Al-Furqan, Ta Ha Publishers, London).

QUR'AN'S SCIENTIFIC ACCURACY ASTONISHES THAI SCIENTIST

While on a visit to Saudi Arabia, Professor Tajaten Tajasen, the former head of the Department of Anatomy and Embryology and the present dean of the college of Medicine at the university of Chang-mi Thailand, was shown some Qur'anic verses and Prophetic traditions (sayings of the Prophet Muhammad, peace be upon him) which dealt with his field of learning. The Professor responded that the Bhuddist scriptures also contained detailed descriptions of the embryonic process.

(However, when Professor Tajaten made a more detailed study of the Bhuddist scriptures he discovered nothing of relevance).

The Professor was then asked if he was acquainted with the work of Professor Keith Moore, a Canadian Scientist. He replied that he knew Professor Keith Moore and he was a very prominent man in the field of Embryology.

Professor Tajasen then read an article of Professor Moore, in which Professor Moore writes that in his opinion a lot of what was revealed in the Qur'an was compatible with modern science. Professor Tajasen was astonished by what he read in the article, and wanted to learn more. The following Qur'anic verse was then read to him:-

"Those who reject Our (Allah's) signs (verses of the Qur'an) We shall soon cast in to the fire: as often as their skins are roasted through, We shall change them for fresh skins, that they may taste the penalty; for Allah (God Almighty) is Exalted in Power, Wise."

(Al-Qur'an Sura 4 Al-Nisa: Verse 56)

Professor Tagasen agreed that this was a reference to the dermatological phenomenon which modern science has only recently discovered, namely that the skin contains all the nerve endings and that if a burn is very deep and the skin is completely burned, then it loses its sense of pain and the person afflicted does not actually feel it. Allah (God Almighty) is aware of this fact and He accordingly makes sure that the unbelievers consigned to hell feel the pain constantly by replacing the skin time and time again so that the nerve endings are renewed.

Professor Tajasen agreed that it is impossible that this could have come from any human source, considering the fact that the Qur'an is a 1400 years old text: this sort of knowledge was simply not known at the time. From whom did this information come. The answer is Allah. Who is Allah, The professor asked. He was informed that Allah is the Creator, from whom comes the Knowledge, Wisdom, Perfection and Mercy.

Professor Tajasen returned to Thailand and delivered a series of lectures concerning what he had learned. As a direct result of these lectures five of his students embraced Islam.

A short while later Professor Tajasen returned to Saudi Arabia to attend a conference in Riyadh. At the conference, the Professor delivered a speech to the delegates. In this speech,

he said that his studies had led him to believe that everything in the Qur'an was true. Some of the signs which were revealed 1400 years ago have only recently been explained by modern science. Muhammad could neither read nor write, added the professor, therefore the truth must have been revealed by the Creator, Allah. The professor continued, saying that the time had come to declare:

La ilaha illallahu Muhamadur-rasulullah
"There is no God but Allah;
Muhammad is the Messenger of Allah"

This dramatic declaration of faith (in front of the camera) drew many exclamations of pleasure and cries of Allahu- akbar (Allah is the Greatest) from the audience. The professor concluded his speech by saying that he had learned much scientific knowledge at the conference and made many new friends, but the most precious thing that he had done was to become a Muslim.

Professor Tajasen accepted the Signs and embraced Islam. Anyone to whom the Signs have been conveyed yet will- fully rejects them - stubbornly clinging to ignorance - faces the fate that Allah outlines in the Qur'anic Verse quoted above.
